BOA Standard Program

1 Metal Hoses (bulk)

BOA Metal hoses are manufactured as bulk products, in different production length according to DN. Depending on the type and accordingly the future application they are provided with a stainless steel braid. They serve as basis material (semi-finished) for the fabrication of standardized hose assemblies (section 2) or for the assembly of custom made products. Some DN / types of metal hoses are available from stock at short notice (see references in the standard product tables, preferred series). For certain types, a minimum purchase quantity is required.

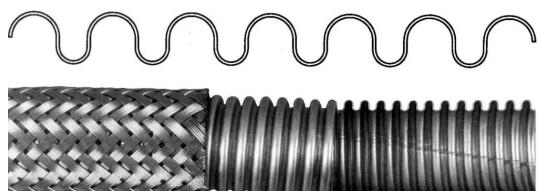

There are two different types of metal hose bulk products:

- **Corrugated Metal Hoses** (or all-metal hoses) (section 1.1): they are **absolutely tight** and are appropriate for high pressure and vacuum.
- **Strip wound Metal Hoses** (with or without sealing strips) (section 1.2): their **tightness being limited**, they are mostly used as protection hoses or ventilation/ suction hoses.

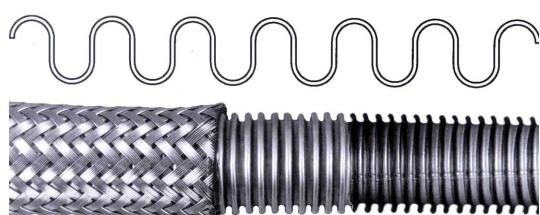

1.1 Corrugated Metal Hoses

The right choice of the metal hose type depends on the targeted use:

- helical corrugation (spiral)
- annular corrugation (parallel)

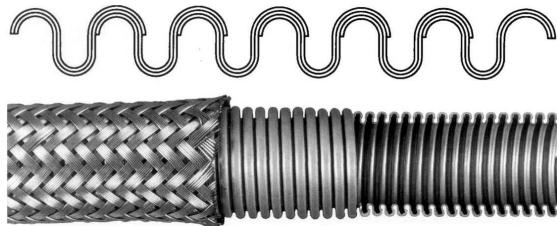

Corrugated metal hose (all-metal hose), helically corrugated

Corrugated metal hose (all-metal hose), annularly corrugated

1.1.1 BOA DUO[®]

BOA-DUO[®]

Helically corrugated stainless steel hose

Double-ply, helically corrugated hose, resistance welded at the crest, cold formed. Very flexible high pressure hose although double-ply construction. Excellent operating stability due to double-ply construction in the convolution flanks and triple-ply construction at the crest. Excellent vibration absorber.

Design and type approval in accordance with ISO-10380 standard.

Materials:

Corrugated hose: stainless steel 1.4571 (similar to AISI 316 Ti)
Braid: stainless steel 1.4301 (similar to AISI 304)

Special materials on demand

Reduction factors at heavy-duty conditions according to ISO 10380.

Application fields:

- all kinds of high pressure applications
- universal vibration absorber
- engine construction, pumps, compressors
- all kinds of pressure pipes for heavy-duty service with extreme working conditions

1.1.2 BOA-SUPRA®

BOA-SUPRA®

Helically corrugated stainless steel hose

Single-ply, helically corrugated hose, resistance welded at the crest, cold formed. Highly flexible pressure pipe: increased operating stability due to double-ply construction at the crest (particularly at dynamic working conditions).

Design and type approval in accordance with ISO-10380 standard.
Reduction factors at heavy-duty conditions see ISO 10380.

Materials:

Corrugated hose: stainless steel 1.4571 (similar to AISI 316 Ti)

Braid: stainless steel 1.4301 (similar to AISI 304)

Special materials on demand

Application fields:

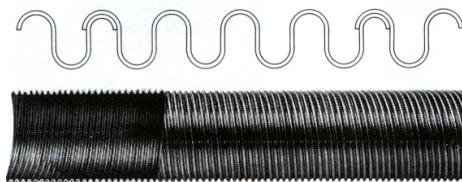

- Pressure pipe for most various applications
- wherever highest flexibility is demanded (e.g. big movements and/or thermal dilatations in the system)
- gas hoses, safety gas hoses

1.1.3 BOA VENTINOX HR

BOA VENTINOX HR

Chimney liner for low temperature heating installations,
perfectly tight, welded

The **VENTINOX-HR** hose is a highly corrosion resistant, flexible chimney liner, perfectly appropriate for heating installations running under low temperature conditions. The VENTINOX-HR liner has the right characteristics for applications working at temperatures below the acid dew point. With a global index of 41* the material used is a high-alloy steel (frequently used stainless steels have a global index of less than 30). Thus the VENTINOX-HR is extremely resistant

against different types of corrosion, particularly against pitting corrosion, the most common corrosion type present in low temperature heating installations. A higher percentage of chrome and molybdenum is responsible for such excellent physical performance.

It may be used at higher temperatures up to 450°C.

*The global index is an empirical value which states that the risk of pitting corrosion diminishes when its value is >30.
Global index (%Cr x 3,3 x %Mo + 30 x %N2).

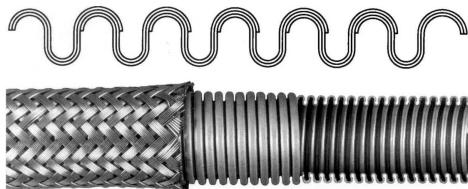

Material: corrugated hose stainless steel F29-M, AL 29-4C

Wall thickness: 0,2 mm

1.1.4 BOA-DUO[®] UHP

BOA-DUO[®] UHP (Ultra High Pressure) Helically corrugated stainless steel hose

Double-ply, ultra high pressure, helically corrugated metal hose, resistance welded at the crest. Due to double-ply wall in the flank, and triple wall on the crest, highest operating reliability and highest flexibility are achieved.

BOA-DUO[®] UHP also has excellent properties for vibration absorption.

Design and type approval in accordance with ISO 10380 Standard.
Fourfold safety against bursting!

Materials:

Corrugated hose: stainless steel 1.4404 (similar to AISI 316L)
Braid: stainless steel 1.4301 (similar to AISI 304)

Derating factors at heavy-duty conditions see ISO 10380 Standard (or our "Technical Instructions for Metal Hoses and Metal Hose Assemblies").

Application fields:

- connecting lines for gas bottles
- filling installations for gas cylinders
- universal vibration absorber
- engine construction, pumps, compressors
- all kind of pressure pipes for heavy-duty service with extreme working conditions

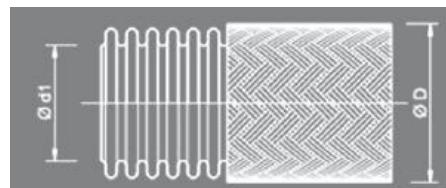

Temperature range: - 196°C until max. 600°C

Preferred series, usually available at short term

* admissible operating pressure with triple safety against bursting for applications not needing ISO 10380 conformity.

1.1.5 BOA PARMECA®

PARMECA®

Annularly corrugated stainless steel hose

PARMECA® is a single-ply, mechanically shaped corrugated hose with normal corrugation, applicable under extreme conditions (-273 °C to 600°C), without natural aging, available without (0) or with one braid (A). The production method guarantees high leak tightness.

Design and type approval in accordance with EN ISO10380 standard.

Materials:

Corrugated hose: stainless steel 1.4404 (similar to AISI 316 L) or
Stainless steel 1.4541* (similar to AISI 321)

*except for DN6, 8 and 10)

Braid: stainless steel 1.4301 (similar to AISI 304)

Reduction factors at heavy-duty conditions see EN ISO 10380.

Application fields:

Transport of liquids and gases with high demands on reliability and service life, or as a tight mechanical protection, such as for petrochemical installations, exhaust applications, air conditioning, etc.

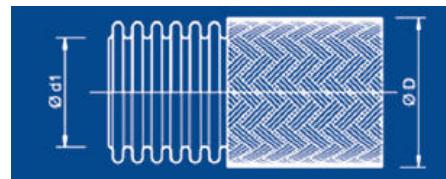

Other materials on demand

1.1.6 BOA PARNOR®

PARNOR®

Annularly corrugated stainless steel hose

PARNOR® is a single-ply, hydraulically formed corrugated metal hose with normal corrugation, very performing, very suitable for extreme conditions (-273°C to 600°C), without natural aging, available without braiding (0), with (A) or 2 (B) braids of high compactness.

The fabrication method of PARNOR® guarantees an extremely high leak tightness product (max. on request 1×10^{-9} mb l / s).

Chemically resistant to a variety of highly corrosive products. Design and type testing according to EN ISO 10380.

Materials:

Corrugated hose: stainless steel 1.4404 (similar to AISI 316 L) or 1.4541* (similar to AISI 321)

*except for DN6, 8, 10, 125

Braid(s): stainless steel 1.4301 (similar to AISI 304)

Special materials on request.

Reduction factors at heavy-duty conditions see EN ISO 10380.

Application fields:

Transport of liquids and gases with very high demands on flexibility, reliability and service life, even under difficult operating conditions, such as cryogenic, petrochemical, nuclear technology, exhaust gases, refrigeration / air conditioning, food industry etc.

1.1.7 BOA PARRAP®

PARRAP®

Annularly corrugated stainless steel hose

PARRAP® is a single-ply, hydraulically formed corrugated hose with narrow corrugation, very performing, very suitable for extreme conditions (-273°C to 600°C), without natural aging, available without braiding (0), with one (A) or 2 (B) braids of high compactness. The production method guarantees a high leak tightness product (max. upon request 1×10^{-9} mb l/s). The performance of the dynamic operation is exceptional: 5 x higher fatigue strength than the requirements of EN ISO 10380 in a small bending radius (EN ISO 10380 improved by 25%).

Materials:

Corrugated hose: stainless steel 1.4404 (similar to AISI 316 L) or 1.4541* (similar to AISI 321)

*except for DN6, 8, 10, 125

Braid(s): stainless steel 1.4301 (similar to AISI 304)

Reduction factors at heavy-duty conditions see EN ISO 10380.

Application fields:

Transport of liquids and gases with very high demands on flexibility, reliability and service life, even under difficult operating conditions (dynamic, vibration, pressure, vacuum), e.g. low temperature, vacuum, petrochemical, nuclear technology, instrumentation, exhaust systems, air conditioning

1.1.8 BOA HP/ THP/ XHP

BOA HP/ THP/ XHP

Stainless steel annularly corrugated metal hose

The **HP**, **THP** and **XHP** are high performance flexible stainless steel hoses, annularly corrugated, for use in high pressure applications. The manufacturing process of the high pressure series, hydroformed, reinforced walls, with narrow corrugation, guarantees a product of high leak tightness (max. on demand 1×10^{-9} mb l/s).

Additional, the Omega shaped corrugation profile ensures an exceptionally good compromise flexibility/ high pressure resistance.
Design and type test in accordance with EN ISO 10380.

Materials:

Corrugated hose: stainless steel 1.4404 (similar to AISI 316 L) or stainless steel 1.4541 (similar to AISI 321)

Braid(s): stainless steel 1.4301 (similar to AISI 304) or 1.4306 (similar to AISI 304L)

Available:

HP: with 1 braid

THP: with 2 braids

XHP: with 3 braids.

Reduction factors at heavy-duty conditions see EN ISO 10380.

Application fields:

Transport of liquid or gaseous media, which make high demands on pressure resistance, flexibility and durability in harsh environments: transfer of industrial gases, steam engines, turbines, plate presses ...

1.2 Strip wound Metal Hoses

1.2.1 BOA DE

BOA DE

Strip wound metal hose

Using metal hoses, electric cables, rubber and plastic hoses, copper pipes and other sensitive conductors become well protected against mechanical damages, welding splatters or chemical influences. While protecting rubber and plastic hoses, moreover they prevent them from stretching and bursting due to inner pressure or from buckling due to too sharp bending.

The protective metal hose **Type DE** is formed by a strip wound, S-profile metal strip; circular cross-section.

Type DE shows an excellent, robust construction, resistant against heavy mechanical movement. Excellent flexibility not hindering or only slightly the space within the conductor to be protected is moving. **Type DE is not tight, and therefore unsuited for pressure piping use.**

Application fields:

- protection of electrical cables, rubber and plastic hoses
- protection against buckling
- bend radius limiter
- suction installations
- pneumatic transport of light materials
(e.g. suction or transport of wood shavings or textile fibres)

Material: Stainless steel 1.4301 (similar to AISI 304)
(other materials on demand)

DN / Designation [-]	Inner Ø [mm]	Outside Ø [mm]	Tolerance ± (i.o.) [mm]	Bend radius (min., without load) [mm]	BOA item n° [-]

DE 8 - 1.4301	8	10	0.2	22	M-0003204

Minimal order quantity (per dimension): **50 m**

Length measure

The hose or hose assembly length shall be measured in either mid-position or in the extended position depending on the purchaser's requirements and shall be the length as ordered with a tolerance of $\pm 3\%$ unless otherwise stated (definition EN ISO 15465). The compressed measure length is 10–15% shorter, the installation length corresponds to the mid-position between extended and compressed position.

1.2.2 BOA VS

BOA VS

Strip wound metal hose, sealed

The ventilation hose type **VS**, due to its heavy execution, is particularly recommended for constant movements and heavy duty use. It is equipped with fibreglass joints for applications up to approx. 400°C. Circular section. Not recommended for conveying liquids and gases!

Materials:

Standard: galvanized steel
Joints: fibreglass

Application fields:

- for constant movements and heavy duty service
- for air, all kinds of exhaust gases, smoke, dust, wood shavings, filings etc.
- for small overpressure up to $p_{working} \leq 0,5$ bar

Temperature range: up to approx. 400°C

Preferred series,

usually available at short term
* minimal order quantity = 20 m; delivery term by agreement

For other Ø please inquire

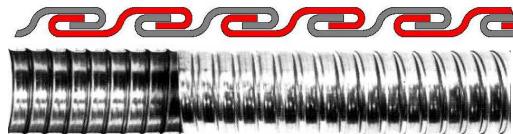

Length measure

The hose or hose assembly length shall be measured in either mid-position or in the extended position depending on the purchaser's requirements and shall be the length as ordered with a tolerance of ±3% unless otherwise stated (definition EN ISO 15465). The compressed measure length is 10–15% shorter, the installation length corresponds to the mid-position between extended and compressed position.

Installation

The connection from hose to machine parts or rigid pipes is realized with brazed or riveted sockets using or not a reduction. For frequent hose mounting to and demounting from the piping, we supply springy, slit, brazed sockets with clamp device. For smaller nominal sizes, as connecting parts rubber sockets may be glued on.

1.2.3 BOA PROTEX

BOA PROTEX

Strip wound metal hose

The protective hose **PROTEX** is a strip wound metal hose with double-strip profile, polygonal section, without gasket, limited tightness, therefore not recommended for conveying liquids and gases. Suitable for all-around movements, also in axial direction. Tolerates small torsion due to polygonal profile. Robust execution and resistant to vibration. Easy assembly.

Material: stainless steel. 1.4301 (similar to AISI 304)

Application fields:

- as exhaust gas, ventilation and suction hose
- for vibration and sound absorption in exhaust manifolds
- applicable for small underpressure, if a slight loss of air is tolerated
- as inliner for pressure hoses operating very high flow rates, to prevent important pressure loss and too high sound emission.

Temperature range: - 196°C up to max. 650°C

Inner Ø [mm]	Outside Ø [mm]	Tolerance ± [mm]	Weight [kg/m]	Bend radius static min. [mm]	Production length [m]	BOA item n° [-]

Other Ø on request

Length measure

The hose or hose assembly length shall be measured in either mid-position or in the extended position depending on the purchaser's requirements and shall be the length as ordered with a tolerance of $\pm 3\%$ unless otherwise stated (definition EN ISO 15465). The compressed measure length is 10–15% shorter, the installation length corresponds to the mid-position between extended and compressed position.

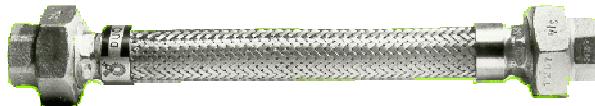

Installation

To allow free movement in all directions, the installation length corresponds to the middle value between stretched and compressed measure. To connect fittings, an appropriate thin-walled tube is pulled over the hose end, then riveted to the hose profile, and brazed or welded.

2 Metal Hose Assemblies

2.1 Vibration Absorbers

2.1.1 BOA JOTA/ KAPPA

BOA JOTA / KAPPA

Stainless steel vibration absorbers, with screws

Thanks to the double-ply corrugated metal hose BOA-DUO®, the vibration absorbers type JOTA and KAPPA are perfectly appropriate to absorb engine vibrations.

Materials:

Corrugated hose	stainless steel 1.4571, double-ply
Braid	stainless steel 1.4301
End rings	stainless steel 1.4301
Screws	malleable cast iron, flat sealing, (special version stainless steel)

Approval

up to DN25 p_{max}: 16 bar admissible

up to DN50 p_{max}: 5 bar admissible

approved flat gasket: KLINGERsil C-4400 / C-4400 L
(gaskets must be ordered separately)

Application fields:

JOTA: longer version, therefore suitable for bigger vibrations of lower frequency.

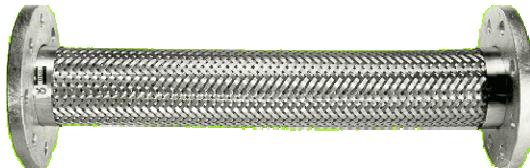

KAPPA: shorter version, therefore applicable when high-frequency vibrations occur.

Max. operating temperature: 300°C with malleable cast iron screws
as special version: 450°C with stainless steel screws

Dimension DN [mm]	Outside Ø [mm]	Thread Rp ["]	Nominal pressure PN [bar]	Type	Nominal length L [mm]	BOA Item n°	Weight [kg]

2.1.2 BOA SIGMA/ OMEGA

BOA SIGMA / OMEGA

Stainless steel vibration absorbers, with loose flange fitting

Thanks to the double-ply corrugated metal hose BOA-DUO[®], the vibration absorbers type SIGMA and OMEGA are perfectly appropriate to absorb engine vibrations.

Materials:

Corrugated hose	stainless steel 1.4571
Braid	stainless steel 1.4301
End rings	stainless steel 1.4301
Collar	stainless steel 1.4571
Loose flanges	Steel 37.2, drilled acc. to PN16, from DN 200 PN10 (special version stainless steel)

Application fields:

SIGMA: longer version, therefore suitable for bigger vibrations of lower frequency.

OMEGA: shorter version, therefore applicable when high-frequency vibrations occur.

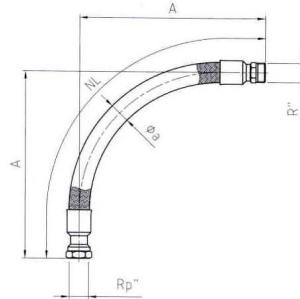

max. operating temperature: 350°C with steel loose flanges
as special version: 450°C with stainless steel loose flanges

2.2.2 BOA SP10

BOA SP10

Annularly corrugated metal hose assembly

DIN-DVGW certified and VdS approved

The annularly corrugated metal hose assembly **SP10** has a medium corrugation and a stainless steel braid. One side inert gas welded, malleable cast iron nipple with male thread according to ISO 7-1, the other side inert gas welded three-part, conical sealing malleable cast iron screw connection with female thread according to ISO 7-1, DIN-DVGW-certificate, VdS approved.

Application fields:

- gas applications
- heating, ventilation, air conditioning
- mechanical engineering
- hydraulic engineering

Materials:

Corrugated hose	stainless steel 1.4404
Braid	stainless steel 1.4301
Fittings	malleable cast iron (weldable)

Working conditions

Min. admissible temperature: $\vartheta_{\text{max, adm.}} = -20^\circ\text{C}$

Max. admissible temperature: $\vartheta_{\text{max, adm.}} = +300^\circ\text{C}$

Nominal pressure rate general: PN25

- For fluids, gases and steams: $p_{\text{max, working.}} = 25 \text{ bar until } \vartheta_{\text{working}} \leq 120^\circ\text{C}$
 $p_{\text{max, working.}} = 20 \text{ bar at } 120^\circ\text{C} < \vartheta_{\text{working}} \leq 300^\circ\text{C}$

- for combustion gases: $p_{\text{max, working}} = \text{PN5 bar at } \vartheta_{\text{working}} = 20^\circ\text{C}$
 (acc. to DIN 3384)

- from 100m on request

Minimal order quantity: - pliable tube DN12: coil with 25 m
- pliable tube DN16: coil with 10 m
- swivel nut: 100 pcs
- gaskets: 100 pcs

Assembly

On request we assemble any length of Cortube T for you.
Price on demand.

3 BOA Standard Fittings

3.1 General

The advantage of metal hoses lies in the fact that most of the standard fittings can be soldered or welded onto the hose, becoming an absolutely tight, pressure and heat resistant, fully metallic connection. To protect the first corrugation directly adjacent to the connection from overheating, an end ring is placed. Hose end and braid are comprised by that ring and join tightly the connection. Metal hose assemblies are executed with a tolerance of $-1\% / + 3\%$ of the nominal length NL (according to ISO 10380).

Dimensions and technical data of the various hose types may be taken from the respective technical data sheet.

Fittings are the interface between the hose and the pipe system. They are subject to the same operating conditions as the hose and must meet the following requirements:

- working conditions
- corrosion resistance (flow medium, material)
- specific, normative regulations for the application (e.g. gas)
- customer's specifications
- good aptitude for the chosen installation method

3.2 Standard Fittings

The diversity of possible fitting variants is almost endless, the choice of material almost indefinitely. Therefore, it is important to define a standard for fittings, so that the customer can benefit from short lead times in production. Of course, they must meet the requirements of the manufacturing processes.

3.3 Customer specific Fittings

Nevertheless, our engineers are equipped with extensive know-how and sophisticated simulation tools to meet specific customer requirements. Advanced connection techniques guarantee optimal solutions.

3.4 Dimensional tables of Fittings

Max. permissible temperature:

$\vartheta_{\text{max, adm}} = 300^\circ\text{C}$

Nominal pressure level in general:

PN25

- For liquids, gases and vapours:

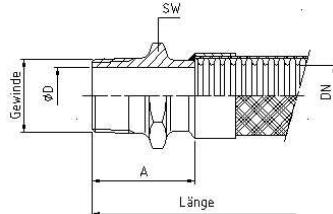

$p_{\text{max, operating}} = 25 \text{ bar at } \vartheta_{\text{operating}} \leq 120^\circ\text{C}$

$p_{\text{max, operating}} = 20 \text{ bar at } 120^\circ\text{C} < \vartheta_{\text{operating}} \leq 300^\circ\text{C}$

- For combustible gases:

(according to DIN 3384)**
 $p_{\text{max, operating}} = \text{PN16 bar at } \vartheta_{\text{operating}} = 20^\circ\text{C}$ depending on
 the nominal size (see tables)
