

BOA® Group

# Expansion Joints, Metal Bellows and Metal Hoses

# Heating, Ventilation & Air Conditioning (HVAC)

Efficient heating and cooling systems are of vital importance in today's buildings. The BOA Group offers an extensive range of flexible solutions, contributing to the safety and reliability of such installations.

**BOA flexible systems are available for all your HVAC applications.**

The product range consists of:

- Stainless steel expansion joints
- Rubber and PTFE expansion joints
- Metal hose assemblies
- Elastomer hose assemblies
- Guides and Anchors

BOA flexible elements are used in HVAC systems

- to compensate for thermal movements in pipe work
- to reduce vibration and noise from pumps, compressors, cooling water installations, turbines and motors
- as demounting joints for pumps, valves and heat exchangers
- for stress free and easy installation of radiators, chilled ceilings, overhead heaters, gas burners, fan-coil units
